

Animals in Winter

Sara Jordan

What do animals do in the winter?
What do they use to survive?
How do they live when it's so cold?
How do they stay alive?

Sometimes they migrate,
Or move where it's warm,
Or hibernate and sleep through the storms.

Sometimes they sleep and wake once in awhile.
Sometimes they adapt to a new lifestyle.

Birds and butterflies, salmon and whales,
Are migrating animals with travelling tales.

Jumping mice and little brown bats,
Hibernate in a deep sleep. That's a fact.

Sleeping animals wake and move once in awhile.
Bears, chipmunks, raccoons all do this with style.

Some animals who are still active all year,
Are foxes, coyotes, porcupines and deer.
